Before servicing your products, you must inform Scandiflash AB if substances you have used in connection with these products are hazardous and which methods you used to remove these products. This information is fundamental to the safety of our service employees. The form must be completed and accepted by Scandiflash before products are shipped to the factory or the service team visits your facilities.

If you have contaminated equipment, you must remove all traces before servicing can take place. It is your responsibility to ensure all known remaining potential hazards are clearly identified.

Scandiflash AB reserves the right to refuse to service at any time if safety hazards are suspected.

You can declare multiple equipment with one form if they have been exposed to the same substances.

Device name(s):

Serial number(s):

Fault description(s):

Hazardous declaration:

List all hazardous substances the equipment has been exposed to such as, but not limited to, radioactive substances, chemical agents, carcinogens substances, reprotoxic substances, corrosive substances, toxic substances, explosive substances, flammable substances.

I, as a representative of (Company name) , ensure that the equipment has been decontaminated from hazardous substances and that there is no remaining risks servicing the equipment.
